

Pool Chemistry

SATURATION INDEX GUIDE

Definitions

- **pH** - on a scale from 0 to 14, the degree of acidity (below pH 7), or "basicness" (above pH 7) of the pool water - 7 being neutral.
Typical pH range: 7.2 to 7.8.
- **Temperature (T)** - degrees farenheight of the water.
Typical T range: 75 to 82 degrees F.
- **Total Alkalinity (TA)** - an index of pool water's resistance to pH change.
Typical TA range: 80 ppm to 120 ppm.
- **Calcium Hardness (CH)** - calcium content of pool water.
Typical CH range: 250 ppm to 350 ppm.
- **Total Dissolved Solids (TDS)** - dissolved solids content of pool water, mostly sodium (salt), calcium, and manganese.
Typical TDS range: 300 ppm to 1000 ppm. Ignored in calculations unless over 1000 ppm, where .1 is subtracted for each 1000 ppm.
- **Calcium Saturation Index (CSI)** - the index of pool water's tendency to scale (positive values) or corrode (negative values), with zero a neutral.
Typical (acceptable) CSI range: -.5 to +.5.

EXAMPLES

(Calculated on Circular Slide Rule)

	pH	T	TA	CH	TDS	CSI	NOTES
POOL 1:	7.2	75	50	120	200	-1.2	Very corrosive
POOL 2:	7.8	80	140	400	800	+.6	Scaling
POOL 3:	7.4	80	120	320	2000	0	Excellent

Note: TDS is ignored in the first two. It reduces the third by .1. Pools with heaters have .2 or more rise in the core or panels and should be adjustable for -.1 to -.2 CSI in the pools.

FORMULAS & MIXTURES

Commonly Used In Swimming Pool Operation

- **Raising Total Alkalinity** - 15 lbs. of Sodium Bicarbonate, added to 100,000 gallons of pool water, will raise the total alkalinity 10 ppm.
- **Raising Calcium Hardness** - 11 lbs. of calcium chloride, added to 100,000 gallons of pool water, will raise the calcium hardness 10 ppm.
- **Raising Chlorine Residual** - 1 lb. of chlorine gas, or 1-1/2 lbs. of calcium hypochlorite, or 1 U.S. gallon of sodium hypochlorite, added to 120,000 gallons (1,000,000 lbs.) of pool water, will raise the chlorine residual 1.0 ppm.
- **Lowering Chlorine Residual** - 1 lb. of sodium thiosulphate, added to 100,000 gallons of pool water, will lower the chlorine residual 1.0 ppm. NOTE: pH value will also be lowered slightly.
- **Maintaining pH While Adding Gas Chlorine to Pool Water** - 1-1/2 lb. of soda ash, or 1/2 lb. of caustic soda (about 1/3 quart of 50 % strength caustic solution), will maintain existing pH value for each pound of gas chlorine added to the pool.
- **Soda Ash & Water Mixture** (For chemical of water) - Maximum of 40 lbs. of soda ash per 100 gallons of water.
- **Muriatic Acid & Water Mixture** (For chemical feeder) - Maximum 1 gallon of muriatic acid per 4 gallons of water.
- **Diatomaceous Earth Precoat Mixture** - .1 lb. of diatomite per square foot of filter area.

Engineering Data *Estimating Total Gallons in a Pool or Spa*

Formula A: Length x Width x Average Depth x 7.5

Example: Pool Length = 40 ft.
 Pool Width = 20 ft.
 Shallow Depth = 3 ft.
 Deep Depth = + 8 ft.
 Total Depth = 11 ft.

Using formula A: 40 x 20 = 800 sq. ft., 800 x 5.5 = 4,400 cubic ft.,
 4,400 x 7.5 = 33,000 gallons.

AREA = A X B

AREA = .45 X (A + B) C

AREA = 3.14 X R X R

AREA = A X B ÷ 2

The area in square feet for pools and spas can be determined by using one or more of the above formulas.

* Friction loss of water in feet per 100 feet length of pipe. Based on Williams & Hazen formula using constant 150.

Engineering Guide

Calculating Surface Area

When calculating the surface area (SA) of a pool, use the following two formulas depending on shape.

Rectangular Formula:

$$\text{Length} = L, \text{ Width} = W$$

$$\text{SA} = L \times W$$

Example:

$$L = 60', W = 30'$$

$$\text{SA} = (60') \times (30')$$

$$\text{SA} = 1,800 \text{ square feet}$$

Round Formula:

$$\text{Radius} = R \text{ (which is } 1/2 \text{ of diameter)}$$

$$\text{SA} = R \times R \times 3.14$$

Example:

$$R = 18'$$

$$\text{SA} = (18') \times (18') \times (3.14)$$

$$\text{SA} = 1,017 \text{ square feet}$$

SURFACE AREA CHART

Pool Size In Feet	Pool Area Square Feet	Gallons Needed Per Inch Depth
50 x 25	1250	779
50 x 50	2500	1558
60 x 20	1200	0748
60 x 30	1800	1122
75 x 40	3000	1870
745 x 42	3150	1964
75 x 605	4500	2805
82 x 42	3444	2147
82 x 75	6150	3834
100 x 45	4500	2805
164 x 60	9840	6134
164 x 75	12,300	7667

Calculating Pool Volume

Gather the following information when determining pool volume (V).

$$\text{Length} = L, \text{ Width} = W, \text{ Depth} = D$$

$$V = L \times W \times D$$

Example:

$$L = 164', W = 75, D = 5'$$

$$V = (164') \times (75') \times (5')$$

$$V = 61,500 \text{ cubic feet (7.48 gal/cu. ft.)}$$

$$V = 479,700 \text{ gallons}$$

It's important to convert meters to feet prior to calculating volume.

$$1 \text{ meter} = 3.28 \text{ feet.}$$

EQUIVALENT DATA

- 1 Meter = 3.28 Feet
- 1 Cubic Foot = 7.48 Gallons
- 1 Cubic Foot of water = 62.4 lbs.
- 1 Gallon of Water = 8.3 lbs.
- 1 part per million (ppm) = 1 pound of chemical per million pounds of water.
- 1 ppm hardness = .058 grains per gallon hardness.
- 1 foot of water depth = .0433 P.S.I.
- 1 P.S.I. = 2.31 Feet of Head.
- For every 2.31 feet of water depth, water pressure increases 1 P.S.I.

Calculating Water Loss

The formula for make up water is important when refilling your pool.

Water loss occurs from evaporation, splashing, backwashing filters, and leaks.

You first need to know many inches of water are required to fill the pool.

The formula is:

$$(\text{In. of water}) \times (\text{SA}) \times (.63) = \text{gallons needed}$$

Example:

$$(6'') \times (1500) \times (.63) = \text{gallons needed}$$

$$5670 = \text{gallons needed}$$

Calculation of Swimmer Loads

The formula for calculating maximum swimmer load per day varies from state to state depending on health department requirements.

The formula listed below allows for one swimmer per 600 gallons of fresh water per 24 hour period.

$$[(\text{Lowest Pump Rate in GPM}) \times (60) \times (24)] - 600 = \text{Load or Daily Pool Limit.}$$

Flow Rate & Pump Curves

It is necessary to be able to calculate the flow rate of your pool based on turnover rate when sizing pumps.

During this process, the following two conversions will be used in order to effectively use the pump sizing curves.

The conversions are:

- Converting inches of Hg to P.S.I.

$$\text{Formula:}$$

$$(\text{inches Hg}) \times (.49) = \text{P.S.I.}$$

- Converting P.S.I. to feet of head

$$\text{Formula:}$$

$$\frac{(\text{P.S.I.}) \times (2.7)}{12} = \text{Ft. of Head}$$

- Converting Ft. of Head to P.S.I.

$$\text{Formula:}$$

$$(\text{Ft. of Head}) \times (.036) \times (12) = \text{P.S.I.}$$

- Flow Rate

PV = Pool Volume, TR = Turnover Rate Formula:

PV = Pool Volume, TR = Turnover Rate Formula:

$$(PV \div TR) \div 60 = \text{Flow Rate}$$

$$\text{Example: } PV = 127,500, TR = 6$$

$$(127,500 \div 6) \div 60 = 354.17 \text{ GPM.}$$

FLOW RATE CHART

Pool Capacity (Gallons)	Flow Rates (GPM)	
	6-hour Turnover	8-hour Turnover
50,000	139	104
55	153	115
60	167	125
65	181	135
70	194	146
75,000	208	156
80	222	167
85	236	177
90	250	188
95	264	198
100,000	278	208
105	292	219
110	306	229
115	319	240
120	333	250
125,000	347	260

Flow Rate Formula:

$$\text{Pool Volume} \div 6 \text{ or } 8 \text{ hours} = \text{GPH}$$

$$\text{GPH} \div 60 = \text{GPM}$$
